

# Test Management tool

## - TestLink -

### Exercise

The purpose of this exercise is to explore the TestLink tool and discuss the best way to manage tests in a calculator webapp

- Please clone or download the following repository:

[https://github.com/tchuna/TVVS\\_TestManageTools](https://github.com/tchuna/TVVS_TestManageTools)

- Inside the folder calculator\_TVVS/react-backend execute the following commands:

npm install

npm start

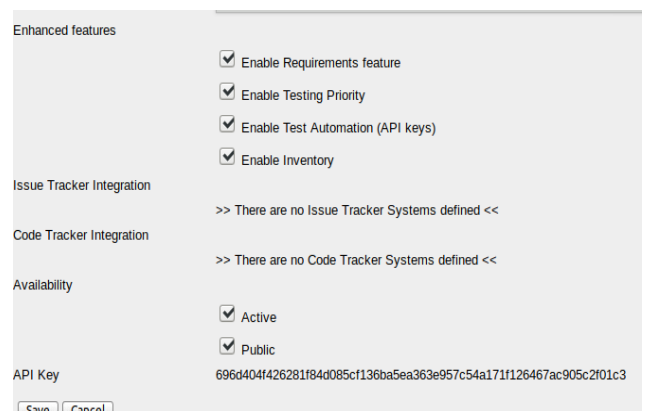

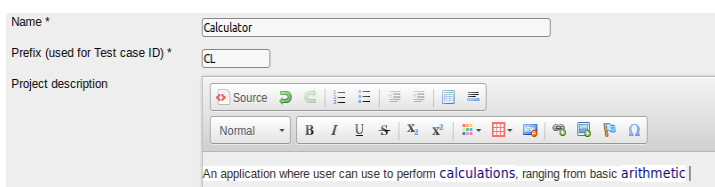

- Inside the folder calculator\_TVVS/client execute the following commands:

npm install

npm start

### 1. Create a new project

- Give a name to the project;
- Give a description to the project;
- Select all the enhanced features.

## 2. Create a Requirement Specification for a Basic Arithmetic whit following requirement operations:

- a) Subtract two numbers
- b) Add two numbers
- c) Multiply two numbers
- d) Divide two numbers

Document ID: RO\_3

Title: Multiply two numbers

Scope:

The User should be able to multiply two numbers |

Document ID: REQ\_1

Title: Basic arithmetic

Scope:

the user should be able to do basic arithmetic in two numbers

Type: User Requirement Specification

## 3. Create a Test Suite with the following Test Case:

- a) Test Subtract two numbers
- b) Test Add two numbers
- c) Test Multiply two numbers
- d) Test Divide two numbers
- e) Coverage test
- f) Mutation test
- h) Security Test
- i) Eslint Test

Create Test Suite

Save Cancel

Test Suite Name: Basic arithmetic

Details:

Test Suite : Basic arithmetic - Create Test Case

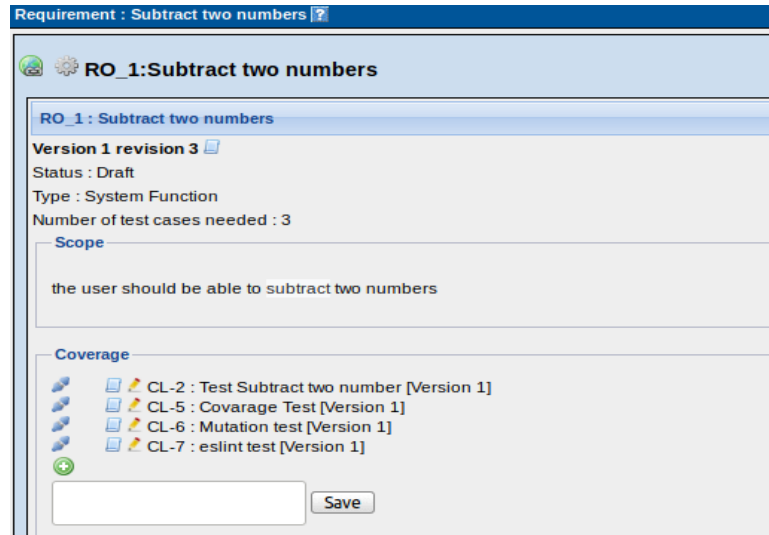

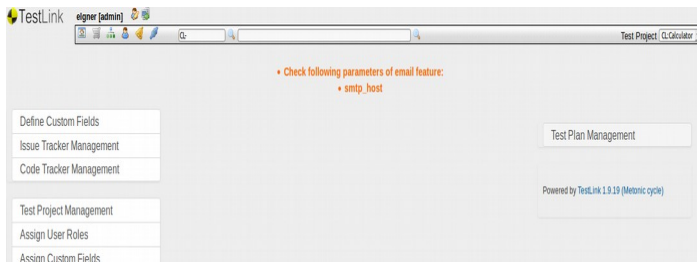

Create Cancel ☐ check to create another test case after saving

Test Case Title: Subtract two number

Summary:

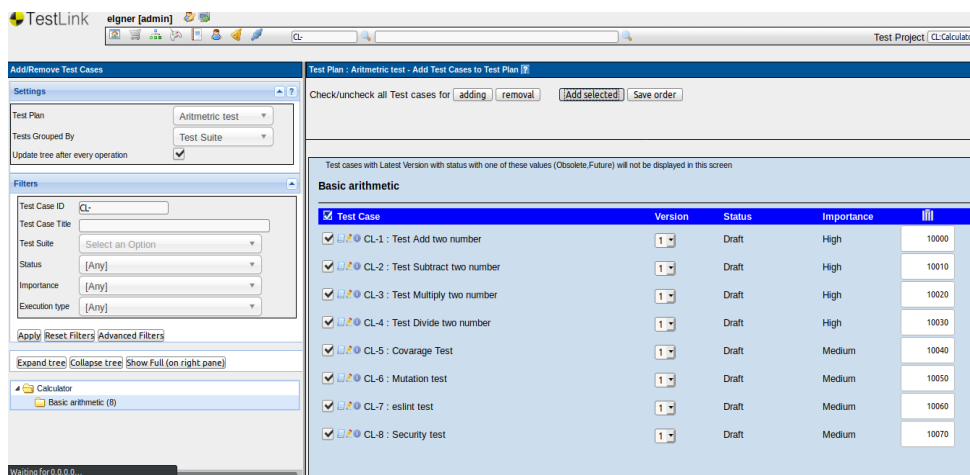

#### 4. Link Test case to the Test Requirement:

- Go to Requirement Specification
- On Coverage add test case for the requirement

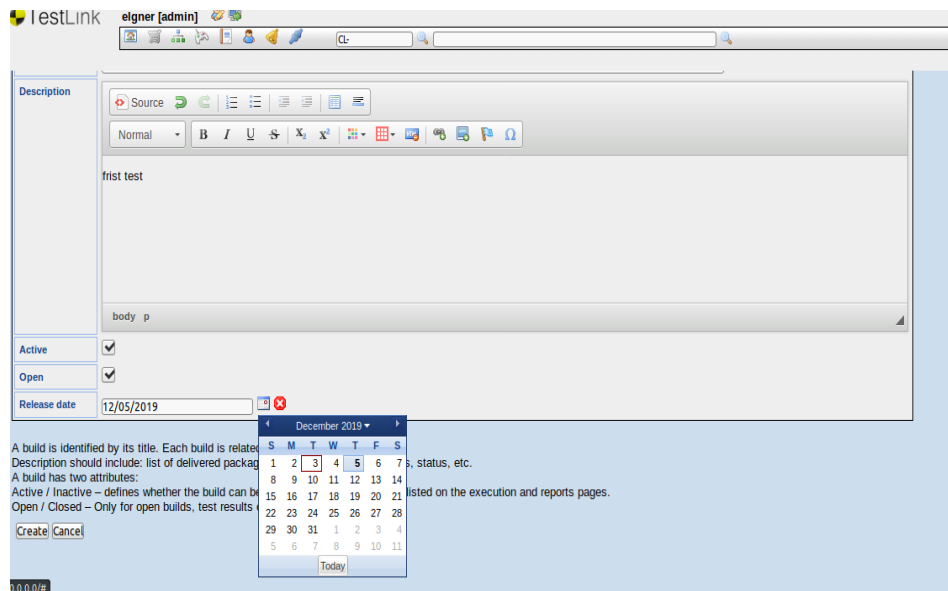

#### 5. Create a Test Plan in home page

- Give a name and description
- Add all the test case to this test plan

## 6. Create a Builds/Releases in home page

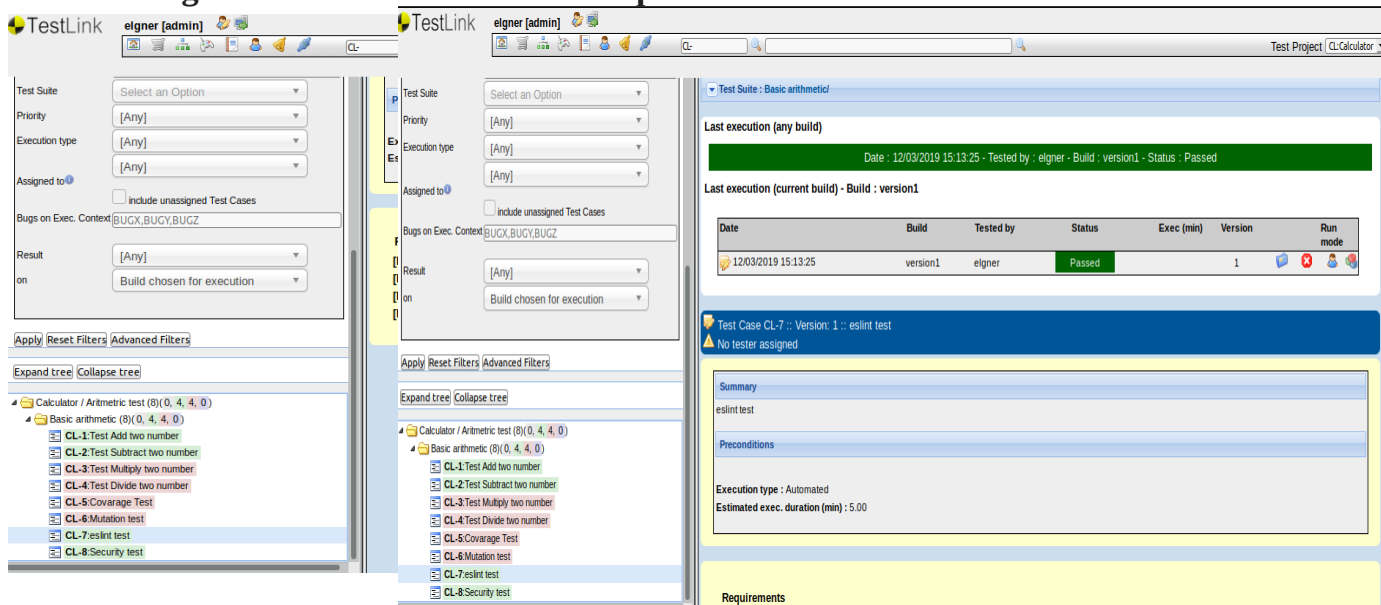

- Name it version-1
- Give a date to the release

## 7. Now, inside the folder calculator\_TVVS/react-backend run the following commands and fill the test result in the TestLink test case:

- npm run unit-test
- npm run coverage-test
- npm run mutation-test
- npm run test-linter
- npm run vulnerability-test

## 8. In Home page (TestLink) in the section Execute Test execute all the test case according to the results obtained in the previous line.

9. Now inside the folder calculator\_TVVS/react-backend/Tests in the file test.js try to fix the failed tests and execute again the all test case in TestLink.

10. Finally, Generate a report in Home page

a) Test Reports and Metrics

b) Metrics Dashboard
